

Facts about clouds

Contrails are "artificial clouds" that sometimes form behind planes.

There are main 3 types of clouds (determined by height).

Clouds can be made out of thousands of tons of water.

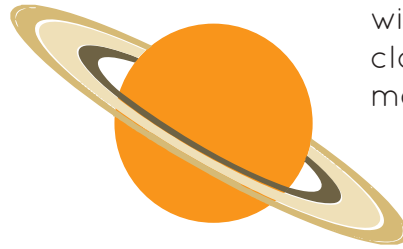

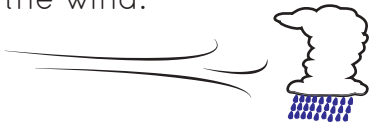

Clouds are made out of water droplets and/or ice crystals.

Fog is also a cloud.

Clouds reflect light and that's why they are white.

All planets and moons with atmosphere have clouds but not all are made out of water.

Clouds move because of the wind.

High clouds are located lower in the polar region than they are near the equator.

The type of cloud associated with thunderstorms is cumulonimbus.
