

Facts about Jupiter

It is the largest planet in our solar system.

It orbits the sun in **12 years**
Earth orbits it in **1 year**.

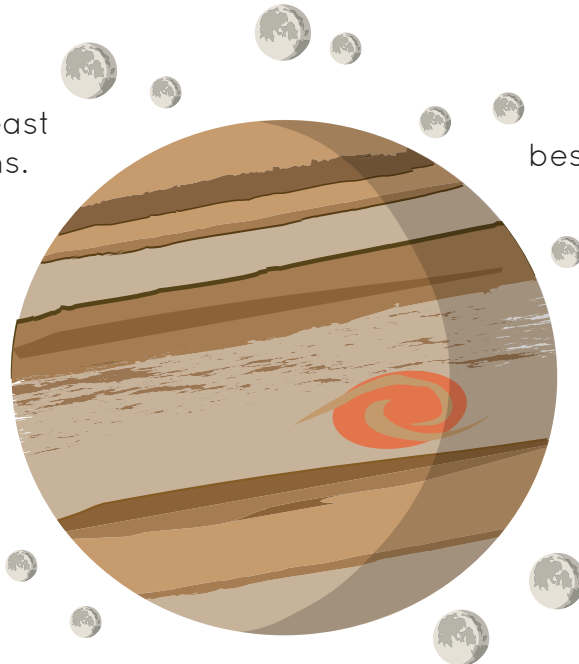

It's mass is 2.5 times greater than all other planet's combined!

The day on Jupiter lasts for 9 and a half hours.
It has the shortest day in our solar system.

It's composed mostly of gas and liquid matter
(hence the gas giant).

It has at least
67 moons.

Jupiter has an
atmosphere.

It can be seen from the
Earth with a naked eye.
It's the brightest object
besides the Sun and the Moon.

It's a very stormy planet - the famous red spot
on it's surface is actually a hurricane
that's been on for hundreds of years.
